

Brainstorming & Idea Prioritization Template

Date	15 July 2026
Team ID	SWTID-2026-4288
Project Name	Credit card Approval Prediction
Maximum Marks	3 Marks

Step 1: Brainstorm and Idea Listing

Each team member lists out as many ideas as possible without judging them at this stage.

S.No	Team Member	Idea / Suggestion	Category	Group No.
1	Kalluri Rohitha	Develop a machine learning model to predict whether a customer's credit card application will be approved based on applicant details such as income, employment, education, family status, and credit history.	Machine Learning	SWTID-2026-4288
2	Jakkula Deepika	Build a user-friendly Flask web application where users can enter applicant details and instantly receive a credit card approval prediction with a simple interface.	Web Application Development	SWTID-2026-4288
3	Pujitha Kojja	Analyze applicant and credit history data, perform preprocessing, feature engineering, and evaluate multiple machine learning algorithms (Logistic Regression, Decision Tree, Random Forest) to improve prediction accuracy.	Data Analytics & Machine Learning	SWTID-2026-4288
4	Akash Mamidi	Integrate the trained machine learning model with the Flask web application, deploy the project, implement input validation, optimize model performance, and perform testing to ensure accurate, secure, and reliable credit card approval predictions.	Model Integration and Deployment	SWTID-2026-4288

Brainstorming & Idea Prioritization Template

Step 2: Idea Prioritization

Rate each grouped idea on feasibility and importance, then select the final idea(s) to move forward with

Group No.	Final Idea	Feasibility (High/Medium/Low)	Importance (High/Medium/Low)	Priority	Selected (Yes/No)
1	Credit Card Approval Prediction using Machine Learning (Random Forest Classifier with Flask Deployment)	High	High	High	YES
2	Loan Approval Prediction using Machine Learning	Medium	High	Medium	NO
3	Customer Churn Prediction using Machine Learning	Medium	Medium	Low	NO
